Sand - White Beach (Product Code: 3802)

Description:

This fine pure white silica sand is probably one of the best unbleached natural sands in the world.

In its moist form, 4.0% ($\pm 1.0\%$) the sand provides the ultimate clean, non-staining, non-toxic sand for play pits and art installations. Having been washed clean of all clay impurities the sand is suitable as a substrate to aquaria. When allowed to dry the sand is free flowing and does not "clump", providing an ideal background for photographic assignments and window displays.

For building & within industry the sand finds application for mortars & renders as well as in abrasives, ceramic and glass manufacture, as well as in filtration, as a white filler and for metal casting – call to discuss your specific requirements.

Suggested Uses:

Photography

Aquatics

Decorative

Play Pits

Window Displays
