# Mortar Sand - White Silica (Product Code: 3802M)

## Description:

This fine pure white silica sand is probably one of the best unbleached natural sands in the world. It comprises both sub rounded and rounded grains making it highly workable and ideal for high quality finish plastering and for the pointing of joints.

As a decorative sand it provides the ultimate clean, non-staining, non-toxic sand for play pits and art installations. Having been washed clean of all clay impurities the sand is suitable as a substrate to aquaria. When allowed to dry the sand is free flowing and does not "clump", providing an ideal background for photographic assignments and window displays.

Within industry the sand finds application in abrasives, ceramic and glass manufacture, as well as in filtration, as a white filler and for metal casting – call to discuss your specific requirements.

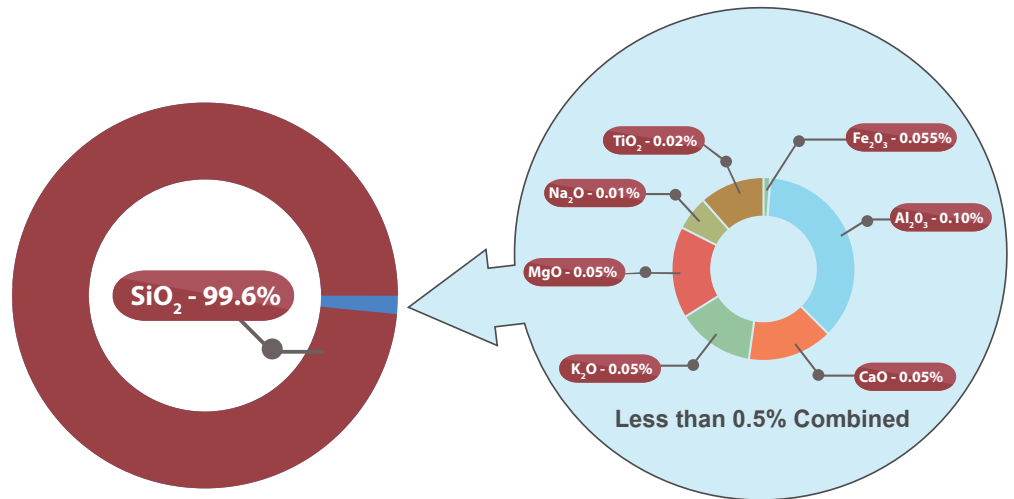

## Suggested Uses:

Mortar Sand

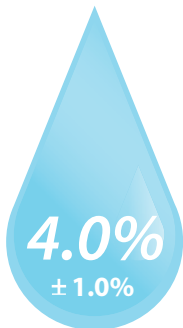

Plastering

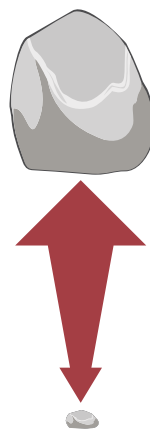

## Typical Chemical Composition

(Based on a sample dried at 105°C)

**Moisture  
Content**

| Particle Size | % Passing |
|---------------|-----------|
| +1.00 mm      | 100       |
| +500 microns  | 99.2      |
| +355 microns  | 95.0      |
| +90 microns   | 0.6       |

(Nominally 0.1 - 0.3mm)
